

# USE CASE DESCRIPTION

**Use Case Id:** 1

**Use Case Name:** Register New Patient

**Use Case Description:** Receptionist registers a new patient by filling out some mandatory details like name, phone number, email, address, age and gender,

**Actors:** Receptionist

**Flows :**

- **Normal Flow :**

- 1) A new patient arrives.
- 2) receptionist takes in his details - name, phone number, age, email and gender and clicks on register.
- 3) Phone number is verified by sending an OTP to the number provided by the patient.
- 4) Receptionist asks for OTP from the patient and clicks on verify OTP button.
- 5) OTP is verified and a message saying 'Patient Successfully Registered' is shown

- **Alternative Flow :**

No alternative flow.

- **Exception Flow:**

- 1) Patient is not new. Patient already registered. Display the patient details.
- 2) Missing critical fields while registering patient. Display error 'missing fields'
- 3) Registration fails due to network error. Display network error.

**Use Case Id : 2**

**Use Case Name:** Fetch Patient Record

**Use Case Description:** Receptionist fetches the patient record by using the patient's email or phone number.

**Actors:** Receptionist

**Flows :**

- **Normal Flow**

- 1) An already registered patient arrives
- 2) Receptionist clicks on the option to get record via number and asks patient for their number.
- 3) Patient gives the number and receptionist enters it in the system
- 4) Patient record gets displayed

- **Alternative Flow:**

- 1) An already registered patient arrives.
- 2) Receptionist clicks on the option to get record via email id and asks patient for email.
- 3) Patient gives email and receptionist enters it in the system.
- 4) Patient record gets displayed.

- **Exception Flow:**

- 1) Patient is not registered. The system displays an error message saying 'patient record not registered'. The screen displays an option to register new patients.
- 2) Network error while fetching the record. Display an error - 'Check your internet connection or re try in some time.'

**Use Case Id : 3**

**Use Case Name :** Fetch Patient History

**Use Case Description:** Doctor fetches patient history with patient verification to help with better consultation.

**Actors :** Doctor

**Flows :**

- **Normal Flow :**

- 1) Patient arrives to the doctors chamber.
- 2) Doctor clicks on the option to get Patient history.
- 3) Prompt saying 'enter otp' is displayed. This is to ensure secrecy and protection of medical data.
- 4) Patient receives an otp on the registered mobile number and he gives it to the doctor.
- 5) Doctor enters the otp and clicks on verify otp.
- 6) Once the otp is verified, Patient history is displayed

- **Alternative Flow:**

No alternative flows

- **Exception Flow:**

- 1) No patient history exists. Display an error message saying 'Patient history not available'

**Use Case Id : 4**

**Use Case Name :** Fetch Patient History

**Use Case Description:** Receptionist fetches patient history with patient verification on request of the doctor

**Actors :** Doctor

**Flows :**

- **Normal Flow :**

1) Doctor requests the receptionist to send the patient history to him before the patient comes in for consultation.

2) Receptionist clicks on the option to get Patient history.

3) Prompt saying 'enter otp' is displayed. This is to ensure secrecy and protection of medical data.

4) Patient receives an otp on the registered mobile number and he gives it to the doctor.

5) Receptionist enters the otp and clicks on verify otp.

6) Once the otp is verified, receptionist shares the patient history with the doctor. The receptionist cannot see the patient history due to security and privacy reasons. It can only be seen by entering the special pin which the doctor has.

- **Alternative Flow:**

No alternative flows

- **Exception Flow:**

1) No patient history exists. Display an error message saying 'Patient history not available'

**Use Case Id : 5**

**Use Case Name:** Update Patient Record after visit

**Actors:** Receptionist

**Use Case Description:** After visiting the doctor, patient medical documents are uploaded to the system by the receptionist for future reference and safeguarding.

**Flows**

- **Normal Flow:**

- 1) After consultation from the doctor, patient provides the receptionist with medical documents (prescriptions, bills)
- 2) The receptionist clicks on the option to update patient record. She fills in all the updated information (last visit, medical documents etc) and click on update record
- 3) A message saying patient record updated successfully is displayed

- **Alternative Flow:** No alternative flow

- **Exception Flow:**

- 1) Network error while updating the record. Display an error - 'Check your internet connection or re try in some time.
- 2) Receptionist forgets to enter an important medical document. On clicking update record, system prompts saying, medical document missing ( eg Prescriptions missing). Data is entered again and submitted.

**Use Case Id:** 6

**Use Case Name:** View Prescriptions

**Actors:** Patient

**Use Case Description:** Patient can view prescriptions on the system to buy the prescribed medicines.

**Flows :**

- **Normal Flow :**

- 1) Select option to filter by date

- 2) Patient enters date for which he wants the prescription, and clicks on find prescriptions

- 3) Prescriptions displayed.

- **Alternative Flow :**

- 1) Select option to filter by doctor name.

- 2) Patient enters the name of the doctor whose prescribed prescriptions he would like to see and clicks on find prescriptions.

- 3) Prescriptions displayed.

- **Exception Flow:**

- 1) Future date is entered. Gives a prompt saying, "cannot enter future date - try again"

- 2) No records available. Displays error message saying "no records available"

**Use Case Id:** 7

**Use Case Name:** Access Visit Information

**Use Case Description:** Patient can access his visit information to keep track of regular visits and to know when should the next visit be made.

**Actors:** Patient

**Flows:**

- **Normal Flow :**

- 1) Patient clicks on the option to display past visits
- 2) Patient specifies the number of past visits he would like to see, then clicks on view.
- 3) Patient gets a list of past visits and the reason for past visits.

- **Alternative Flow:**

- 1) Patient click on the option to display past visits
- 2) Patient clicks on display all visits.
- 3) Patient gets a scrollable list of all the past visits

- **Exception Flow:**

- 1) No past visit data available. Display error - 'no past visit data available'.

**Use Case Id:** 8

**Use Case Name:** Access Medical Bills

**Use Case Description:** Patient can access medical bills by providing the date for which the bill is required.

**Actors:** Patient

**Flows**

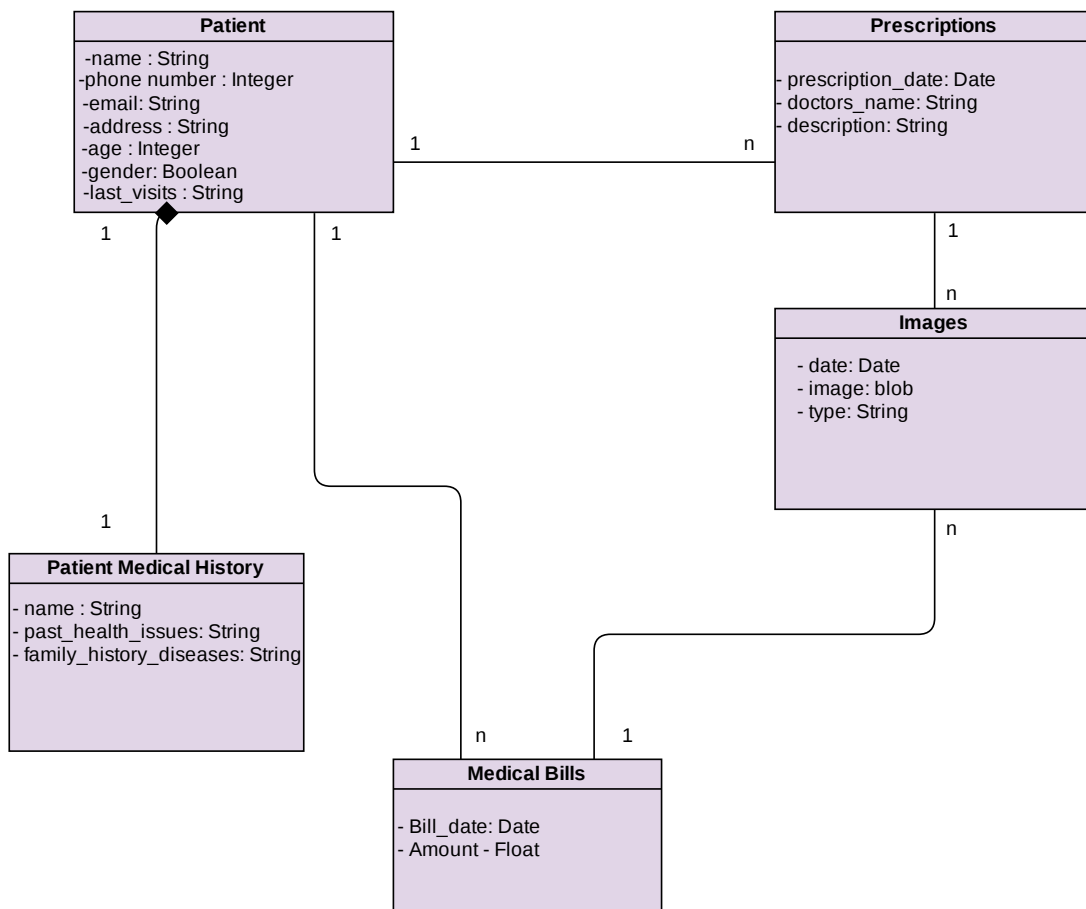

- **Normal Flow**

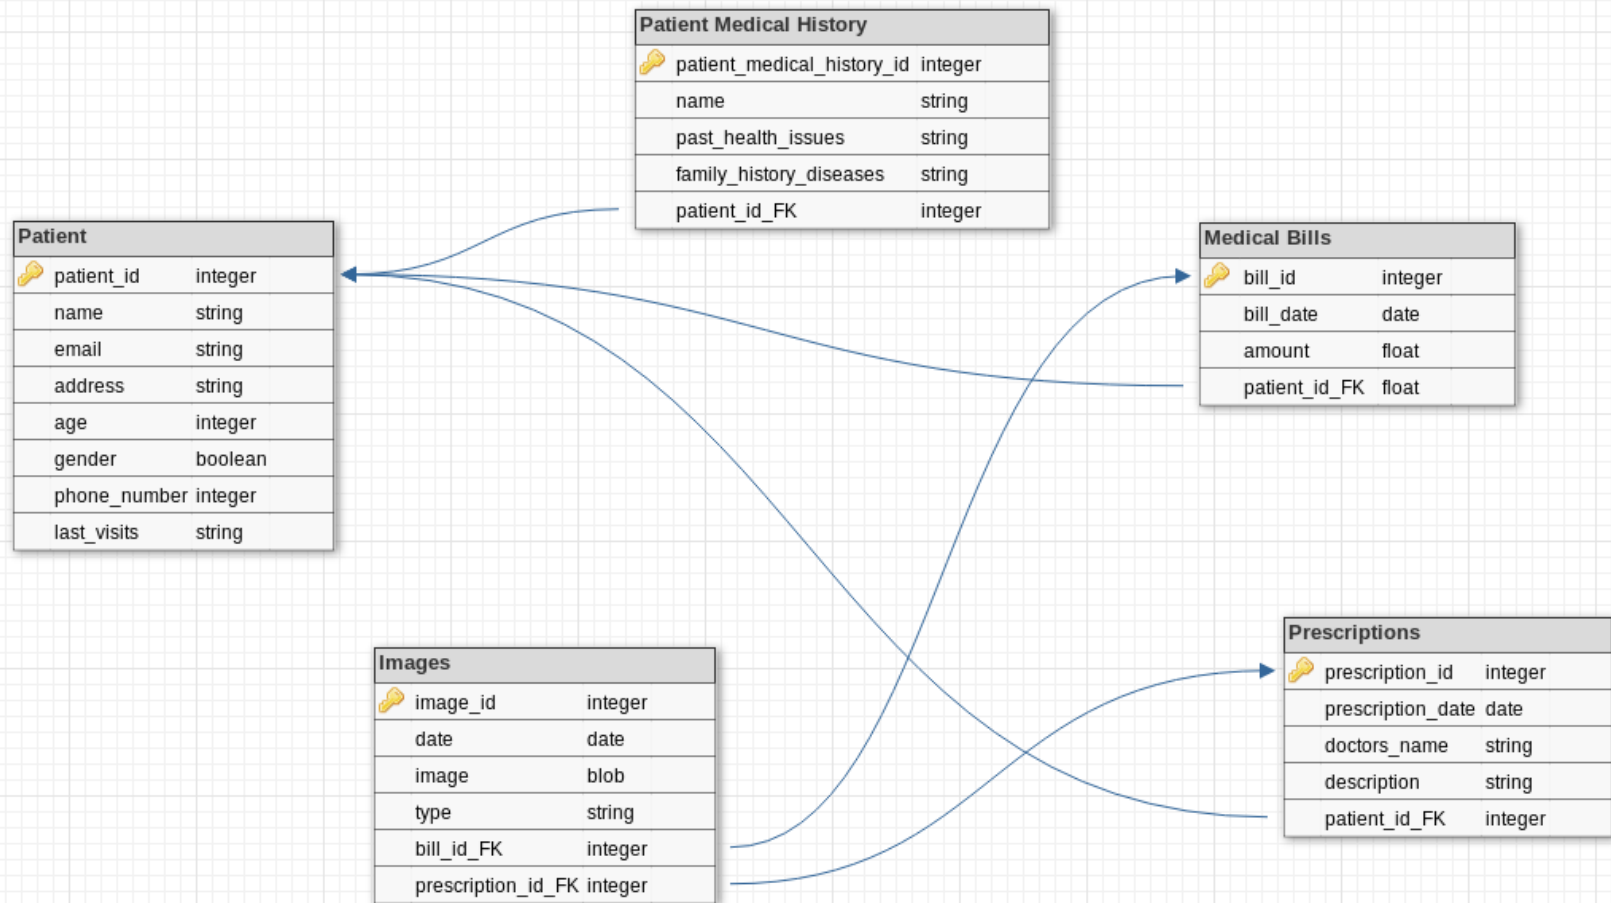

- 1) Patient clicks on the option to view medical bills.
- 2) The date for which the medical bills is to be provided is filled out. Click on the icon.
- 3) All the medical bills pertaining to that particular date are displayed.

- **Alternative Flow:** No alternative flow

- **Exception Flow:**

- 1) No medical bills available for the date entered, error message saying - 'No bills found for this date' gets displayed.
